

State-of-the-art  
**data center**  
and  
**office complex**

Digital Info Security Company (DISC) provides customers with many affordable outsourced automated IT solutions. E-mail Archiving and Compliance, Email Conversion, Encryption, Encrypted Online File Sharing, Instant Message Archiving & Compliance, Remote PC Backup/File Sharing, BlackBerry Hosting and Website Hosting are just some of the solutions that DISC offers.

Recent government and industry requirements in both the securities and medical industries have put a strain on the IT departments of many institutions. Since many small companies do not have IT departments, an attractive solution is to outsource. DISC provides affordable and reliable solutions to meet these requirements.

Our new 9000 SF facility in Westminster, Colorado features a state-of-the-art data center and ample office space. Built in 2001, the data center is equipped with secure server racks and can grow with our expanding customer needs. The facility has the capability to handle 100MBps of incoming data, burstable to 1GBps, and is secured with an onsite backup generator and access to multiple fiber lines in an effort to provide continuous service in case of outages.

DISC began trading on the Pink Sheets in April of 2007 under the symbol DGIF. Also in 2007, DISC leased office and data center space in Singapore for the opening of its Asia-Pacific headquarters.

#### **DISC PolicyBridge™ Email Archiving Services**

DISC's secure email archiving and compliance services assist customers in meeting regulatory compliance standards such as SEC, FINRA (NASD), HIPAA, Sarbanes Oxley and other legislation. DISC products help companies lower the risk of lawsuits (harassment, discrimination, etc.), discourage illegal or regulation-violating activities, provide cost savings by reducing hours required for review of electronic messages, and help decrease storage costs associated with archived messages. Additional cost savings are realized by the reduction or elimination of fines for non-compliance and illegal activity.

#### **DISC Remote Data Backup Services – RestoreRex™**

DISC is promoting easy to implement, professional remote backup solutions. With DISC's easy to use web interface, users can backup and restore individual files and databases with a couple clicks of the mouse. RestoreRex™ is compatible with all common operating systems and platforms, and the program functions automatically on a schedule set by the user. With our large data center, the cost of providing real time remote and redundant backup is less expensive than most companies can implement onsite.

#### **DISC Email Encryption – Magic KeyRing Security System™**

DISC has integrated an email encryption system into its secure e-mail services to create its Magic KeyRing™ Security System. The system is intended to allow companies to automatically encrypt all e-mail transactions, transparent to the individual user. The product provides companies with a simple solution for greater security and compliance.

With Magic KeyRing™, DISC is poised to provide a unique, comprehensive solution for HIPAA compliance to hospitals and associated offices that is offered by no other competitors. Our goal is to provide a product that will ensure the safety of corporate and private e-mail and other communications.

#### **DISC Recent Events:**

DISC has showcased its products and services at the following tradeshows:  
FINRA Small Firms Conference Series; FINRA Spring Securities Conference; The IT Summit  
AICPA TECH+ Conference; NSBA T+L; TD AMERITRADE Institutional Partnership Fall Regional Conference
